

# Claude Design → Video in 4 Steps

Turn Any Claude Design Into an Animated MP4 (No Coding Needed)

**01**

## Step 1: Create in Claude Design

Head to Claude Design and chat your way to beautiful visuals, slides, or motion graphics. Just describe what you want — Claude builds it live in your browser. No design experience needed.

### QUICK TIPS

- Use natural language prompts to iterate on layouts, colors, and copy
- Claude Design supports slides, email templates, infographics, and more

**02**

## Step 2: Export & Download as .zip

When your design is ready, click [Export] → [Download project as .zip]. This bundles all the HTML, CSS, and assets into a local folder you can open in any code editor.

### QUICK TIPS

- Find the Export button in the top-right of Claude Design
- The .zip includes all source files — no cloud lock-in

**03**

## Step 3: Open Locally in Claude Code

Unzip the project and open it in Claude Code (or Antigravity / VS Code with the Claude Code extension). Claude Code will recognize the project structure and let you animate, edit, and preview it directly.

### QUICK TIPS

- Claude Code, Antigravity, and VS Code with the Claude Code extension all work
- You can tweak animations and text inside the code before rendering

## Step 4: Install HyperFrames & Render to MP4

In Claude Code, install HyperFrames by running the command below in your terminal. If you are using VS Code or Antigravity with the Claude Code extension, the same slash commands will register automatically. npx skills add heygen-com/hyperframes

### 💡 QUICK TIPS

- Or provide the full repo link: <https://github.com/heygen-com/hyperframes>
- npx hyperframes preview → live browser preview
- npx hyperframes render → exports final MP4
